DocGenerator

Real-time document creation in ServiceNow

Generating recurring forms and documents is tedious and prone to errors reducing productivity. DocGenerator enables document creation using real-time data from anywhere inside the ServiceNow platform to increase productivity and mitigate risk. ServiceNow customers can quickly create one or thousands of Word, PDF, or HTML files with desired formatting saving enterprises millions every month.

Schedule a Consultation and Custom Demo:
dtechapps.com

DocGenerator

Instantly auto-populate, auto-complete, and electronically sign files, forms, and documents in ServiceNow with DocGenerator

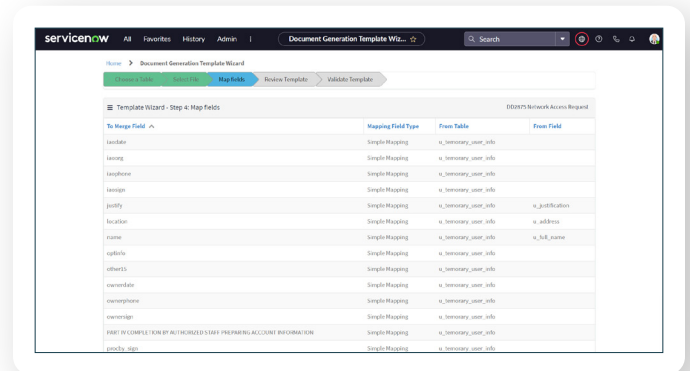

Auto-Complete Forms

Eliminate manual errors by leveraging real-time data stored in ServiceNow to auto-complete forms. Setting up auto-complete is a snap. Whether a single form or thousands of documents, DocGenerator has no limit on the number of templates it can support and no limit on the number of forms it can auto-generate.

Quick-start Form Wizard

Quickly and easily map fields in ServiceNow to fields and locations on a document or form to streamline auto-completion of documents. Quick-start form wizard is so easy any power user can add or update a new form in an instant eliminating the need for expensive and time consuming programming and development of custom configuration of each document.

Upload & Merge Library Files

Content merge action allows users to click to consolidate and merge ServiceNow data into a file template. File formats available include CSV, PDF, XML, DOC, DOCX, TXT, PPT, PPTX, or HTML.
